ANALYSIS TO IMPROVE CUSTOMER RETENTION AT FLIPKART

-BY MOGANAPRIYAA V

OBJECTIVE

- The primary objective of this project is to analyze customer call data and assess various aspects of customer service performance to determine if and how it impacts customer retention. The goal is to identify specific issues within customer service operations that may be affecting customer satisfaction and retention rates.

Key Metrics

CUSTOMER SATISFACTION SCORE (CSAT):

Measures satisfaction score of customers. Higher CSAT score indicates more satisfied customer and vice versa

CUSTOMER SENTIMENT:

Positive sentiment indicates customer is satisfied with the service while negative sentiment indicates dissatisfaction among customers

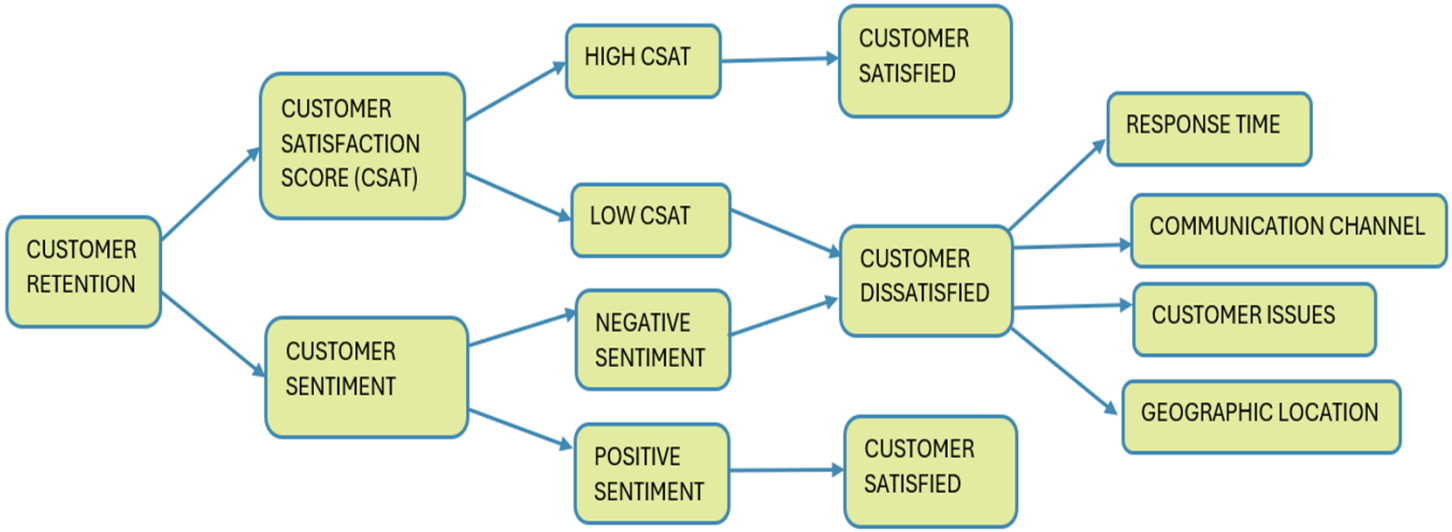
RESPONSE TIME:

Time taken to respond to customer issues. Response time categorized as Above, Below and Within SLA. Response time above SLA indicates less satisfied customer and vice versa

COMMUNICATION CHANNEL:

It is the channel through which customer issues are resolved. It is further analysed based on CSAT score.

METRICS CHART



DATA CLEANING

Data is cleaning is done through various actions to ensure the reliability of the analysis. The following data cleaning steps were done.

Data Import:

Call center Data provided was in CSV file, so we imported that CSV file into Excel for further processing.

Missing Values:

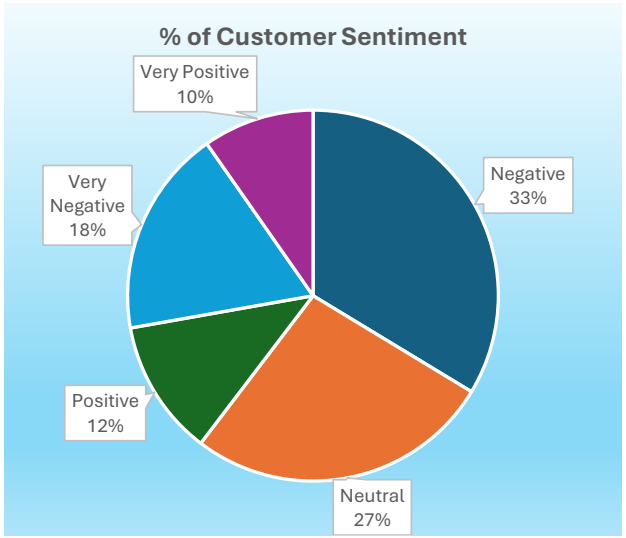
CSAT Scores: Many missing values were found in CSAT score column. These columns were not removed as they can help in analysis when linked to other columns.

City and State: Few values in these columns were missing and labelled as N/A. These were replaced with blank as it does not affect results much. As these were not critical for the analysis, no imputation was performed.

Removing Duplicates:

The dataset was checked for duplicates, as no duplicates found hence, we did not remove values.

HYPOTHESIS ANALYSIS



HYPOTHESIS 1 – CERTAIN CALL CENTRES HAVE HIGHER NEGATIVE SENTIMENTS

DATA COLUMNS –

Customer Sentiment, Call Centre.

ANALYSIS –

Count of customer sentiment across various call centre is analysed.

ANALYSIS –

Count of customer sentiment across various call.

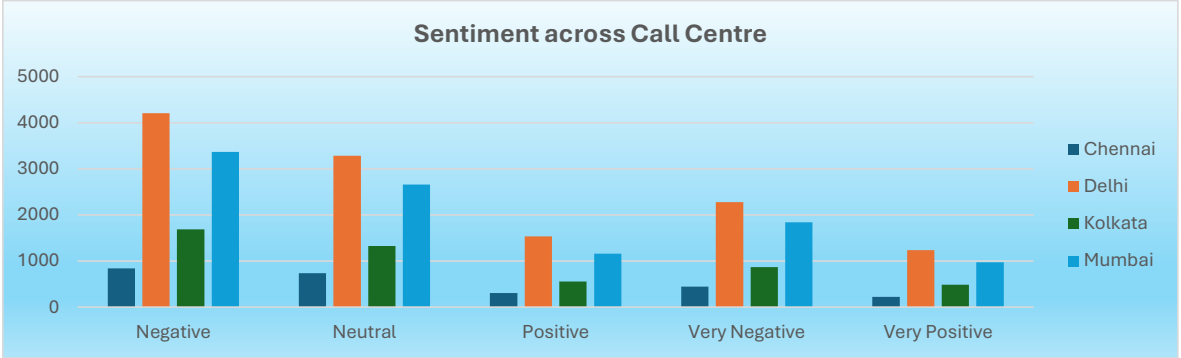
centre is analysed

CONCLUSION –

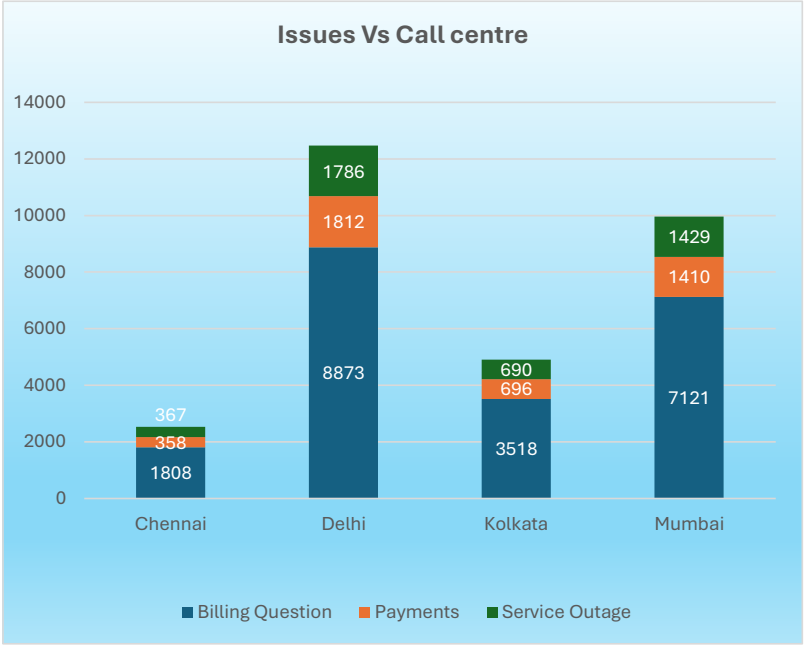
51.7% of the customers in total have negative sentiment which greatly affects Customer retention. Also Delhi call centre has more number of negative sentiments.

RECOMMENDATION –

Huge percent of Negative sentiment impacts customer satisfaction greatly. Reason for negative sentiment should be further analysed.



HYPOTHESIS ANALYSIS



HYPOTHESIS 2 – CERTAIN CALL CENTRES HANDLE QUERIES FROM LARGE NUMBER OF CITIES

DATA COLUMNS –

City, Call Centre.

ANALYSIS –

Number of cities under each call centre is analysed. Call centre with large count of cities will have lower CSAT Score.

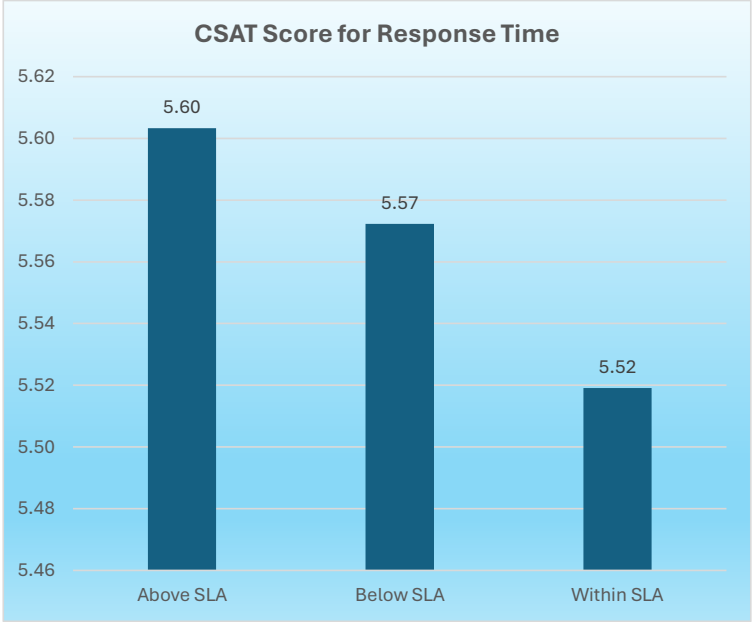
CONCLUSION –

Call centre in Delhi handles customers from 12471 cities followed by Mumbai which handles 9960 cities. Since Delhi has to handle large number of customers it has higher negative sentiment

RECOMMENDATION –

To address this issue more trained employees should recruited to handle large amount of issues.

HYPOTHESIS ANALYSIS



HYPOTHESIS 3 – HIGHER RESPONSE TIME WILL HAVE LOWER CSAT SCORE

DATA COLUMNS –

CSAT Score, Response time

ANALYSIS –

Average CSAT Score for all three categories of response time is analysed. It is found that CSAT Score is higher for above SLA category.

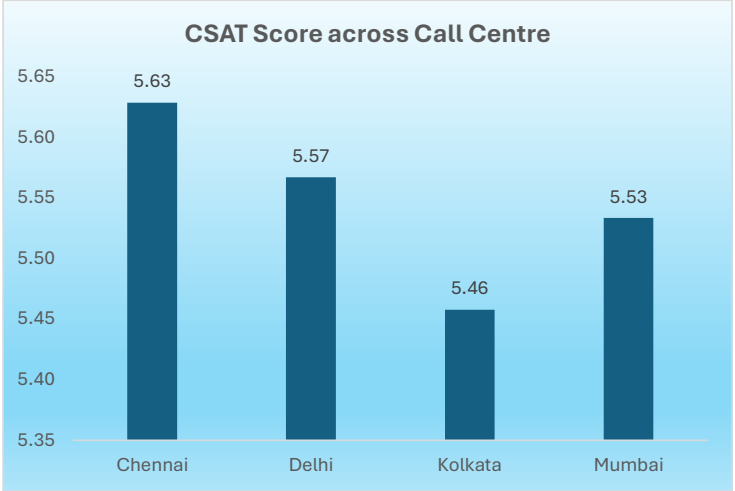
CONCLUSION –

From the analysis it is evident that response time does not impact CSAT score. Lower CSAT score might be due to other reasons

RECOMMENDATION –

This Hypothesis is not further analysed as it does not impact CSAT Score.

HYPOTHESIS ANALYSIS



HYPOTHESIS 4 – SOME CALL CENTRE HAVE LOWER CSAT SCORE THAN OTHERS

DATA COLUMNS –

CSAT Score, Call Centre.

ANALYSIS –

Average CSAT Score for all four call centres analysed.

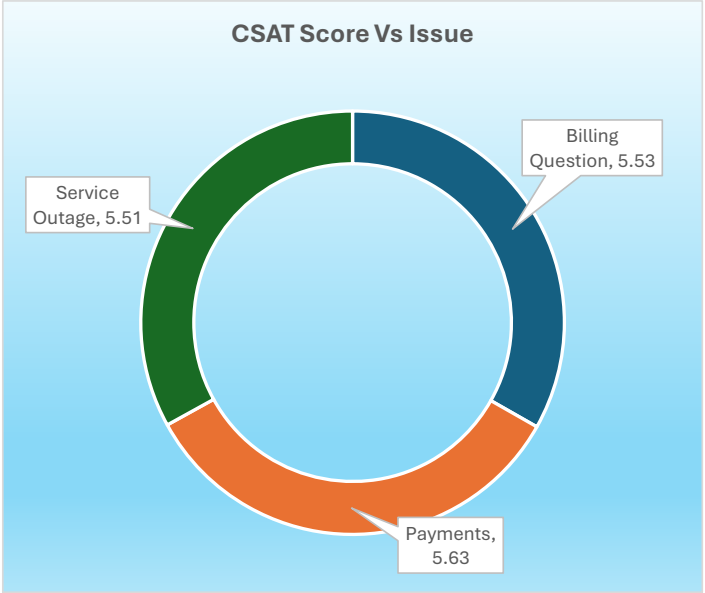
CONCLUSION –

From the analysis it is found that Kolkata has lower CSAT Score.

RECOMMENDATION –

Relevant training to address customer issue should be provided to employees in Kolkata which helps to improve CSAT Score.

HYPOTHESIS ANALYSIS



HYPOTHESIS 5- SOME ISSUES HAVE LOWER CSAT SCORE THAN OTHERS

DATA COLUMNS –

CSAT Score, Issue

ANALYSIS –

Average CSAT Score for all issues were analysed.

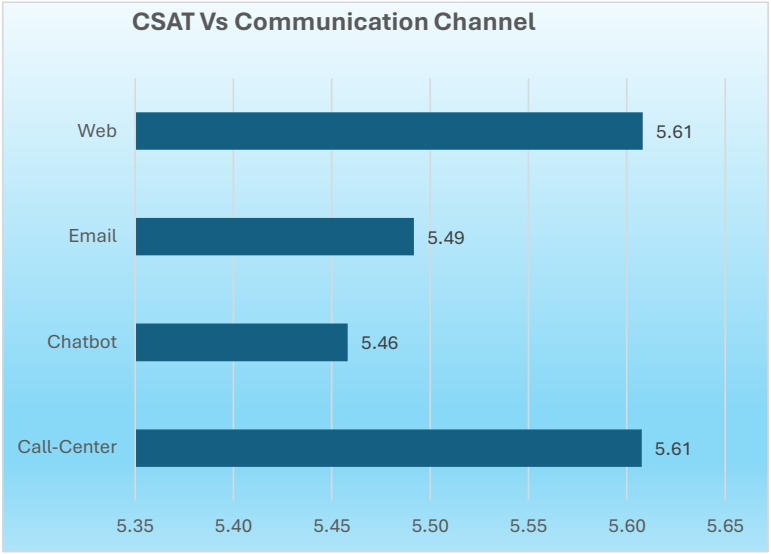
CONCLUSION –

From the analysis it is found that service outage issue slightly lower CSAT score than other issues.

RECOMMENDATION –

Proper Maintainence should be ensured and cutomers should be informed priorly regarding any planned service outage. This will improve the CSAT Score.

HYPOTHESIS ANALYSIS



HYPOTHESIS 6 – CERTAIN COMMUNICATION CHANNEL HAVE LOWER CSAT SCORE THAN OTHERS

DATA COLUMNS –

CSAT Score, Communication Chanel

ANALYSIS –

Average CSAT Score for all communication channels are analysed

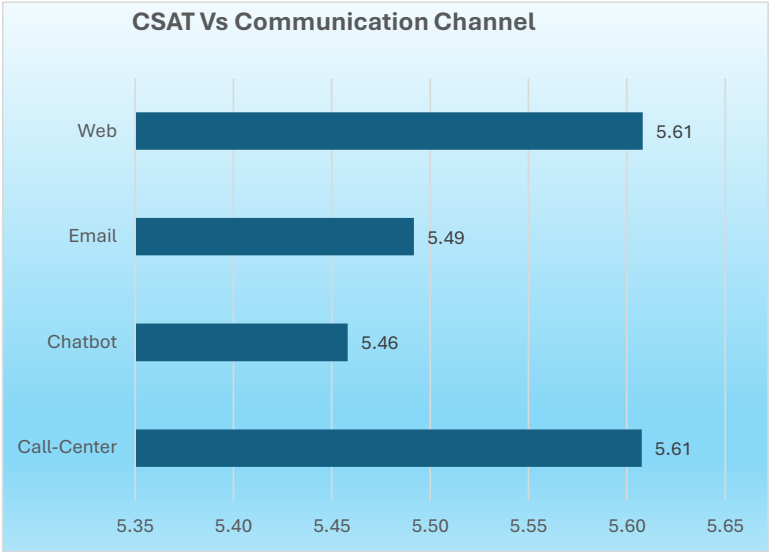
CONCLUSION –

From the analysis it is found that chatbot has lower CSAT Score followed by Email.

RECOMMENDATION –

Chat bot response and Email communication should be improved to increase customer satisfaction.

HYPOTHESIS ANALYSIS



HYPOTHESIS 7 – SOME STATES HAVE HIGHER NEGATIVE SENTIMENT THAN OTHERS

DATA COLUMNS –

Sentiment, State.

ANALYSIS –

Negative and Highly Negative Sentiments across different states were analysed

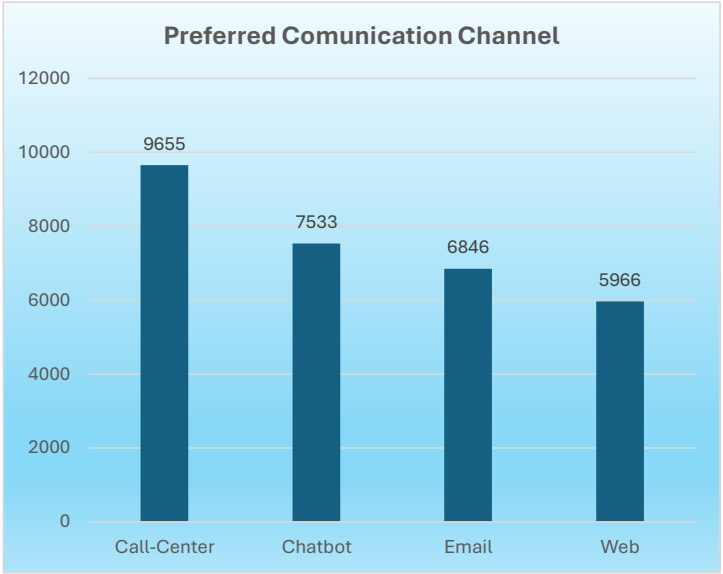
CONCLUSION –

Count of Negative and Highly Negative sentiment for all states were analysed and it was found out that Uttarpradesh has higher negative sentiments followed by Maharashtra and Tamil Nadu.

RECOMMENDATION –

Chat bot response and Email communication should be improved to increase customer satisfaction.

HYPOTHESIS ANALYSIS



HYPOTHESIS 8- CUSTOMERS PREFER CERTAIN COMMUNICATION CHANNEL RATHER THAN OTHERS

DATA COLUMNS –

ID, Communication channel.

ANALYSIS –

Most preferred communication channel to resolve issues were analysed.

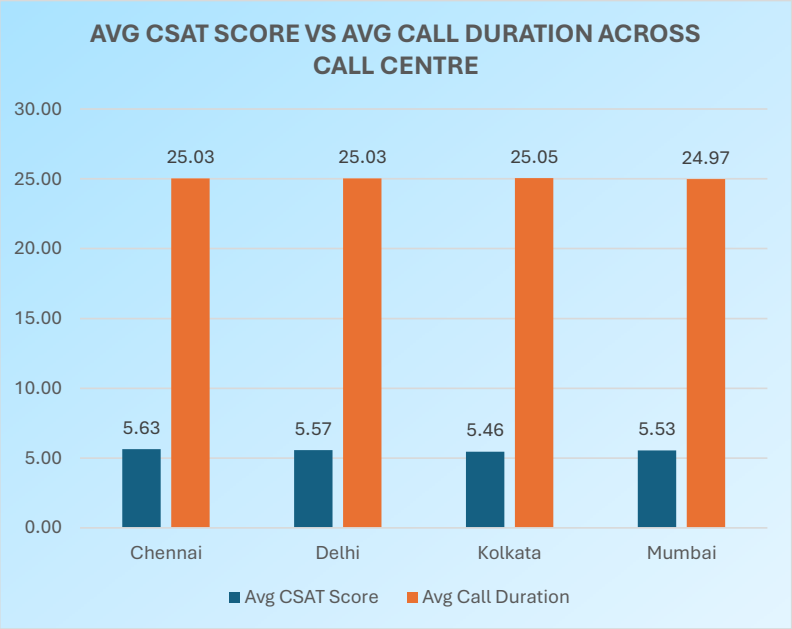
CONCLUSION –

From the analysis it is found that customers prefer call center over other communication channels

RECOMMENDATION –

According more employees to be allotted to address queries through call centre and training to address the queries should be provided to imorove customer satisfaction.

HYPOTHESIS ANALYSIS



HYPOTHESIS 9- CALL CENTRE WITH WITH HIGHER CALL DURATION MAY HAVE LOWER CSAT SCORE

DATA COLUMNS –

Call Centre, CSAT Score, Call Duration.

ANALYSIS –

CSAT Score for call duration across all call centre were analysed. Correlation Analysis resulted in a negative value (-0.187) which suggests almost no relationship between call duration and CSAT Score.

CONCLUSION –

Hence this is not analysed further

RECOMMENDATION –

However lower call duration means quicker issue resolving. Further increasing customer satisfaction.
